	Urgent	Not Urgent
Important	- Type moves in one by one, rejecting illegal moves - Stockfish eval after each move, flag blunders (eval drop > 150 cp) - Label each blunder by phase (opening, middlegame, endgame) - Save games to a JSON file - After 10+ games, report blunders per phase	- Blunder type tagging (hung piece, missed tactic, other) - Import games from PGN files - Charts of blunder trends over time - Filter report by color, opening, or opponent rating
Not Important	- Move legality and board state: python-chess - Position evaluation: Stockfish - Saving and loading data: json	- Photo or scoresheet recognition - GUI or web app - Multiplayer or social features - AI coach
